CJTS

Self-service portal for the public to file, negotiate, mediate and manage tribunal matters (Small Claims, Employment Claims, Community Disputes, Protection-from-Harassment) entirely online.

New table

Capability	What do users do
Start a new tribunal claim	Guided form for Small Claims, Employment Claims, Community Disputes or Harassment cases
Upload evidence	Add documents, photos or videos straight into the online case file
Negotiate online	Swap offers in a secure chat and lock in an instant settlement when both sides agree
Book mediation	Choose a slot; the system emails the Zoom link or courtroom details
Build a hearing bundle	Drag files into order; CJTS spits out one paginated PDF for the judge
List property defects	enter each defect with photos and costs in the Defect Schedule tool
Serve papers by e-mail/SMS	one click to send; see when the other party opens the notice
Join video or hybrid hearings	launch Zoom from the case file; invite auto-adds to your calendar
Pay fees online	PayNow, card or NETS; unused hearing fees are auto-refunded
Track the case	colour-coded timeline shows every filing, notice and outcome at a glance
Enforce a Small Claims order	apply online to seize goods or otherwise enforce payment
Enforce an Employment Claims order	same four-step wizard for employment awards or settlements
Download sealed orders	grab the signed PDF judgment as soon as it's issued
Log in easily	Singpass for individuals, CorpPass for companies, or a one-time CJTS Pass for visitors
Get on-screen hel	tool-tips and live-chat link on every page

Notes

Different corum except SCT ARs (not judiciary)

Mostly unrepresented. At request, represented by another non-lawyer (e.g. family member) or lawyer (rare)

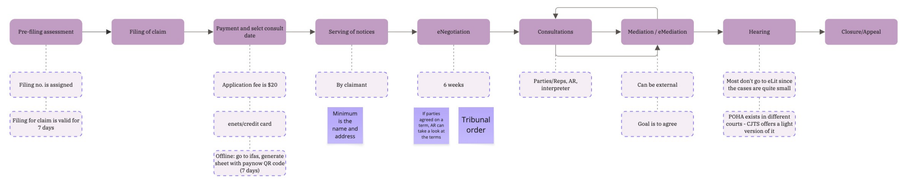
SCT (1st version) replicated to CDRT

SRPs would be taken care by registrars

Malte's walkthrough notes:

- Cases usually overseen by a judge except for small claims where a non-JO AR/SAT would (still having the right to issue order at the end)
- Happy flow: filing, consultation, resolution, tribunal order (ACO). If no agreement -> litigation
- Backend user mgmt is redundant (asking for information available in WOG AD). Not much pressure to change as number of adjustments is low
- DB replica for reporting, updated once a month
- Public (front end) portal follows a similar high-level screen segregation as the backend portal: select a workflow step (filing, mitigation...), then see cases in that step
  - confusing for the layman who would probably expect to see a list of cases (well, tbh: their single case) first, then see what's up with those on the second level of screens.
  - this task-first/inbox-driven views make sense for power users (lawyers, JOs, ROs). And even those would benefit from a case detail page summarising everything about a case
- observation from Kenny(?): across all systems, there are increasingly many tools for asynchronous communication for info collection, mediation etc... would be interesting to see how those would map into a unified system
- File sizes allowed to upload limited to 5MB -> compared to eLit (100s of MB) meant to keep things simple

CJTS Workflow overview



CJTS Back office

Case queue for the ARs

Task list is the action items that they need to do

Appointments = calendar

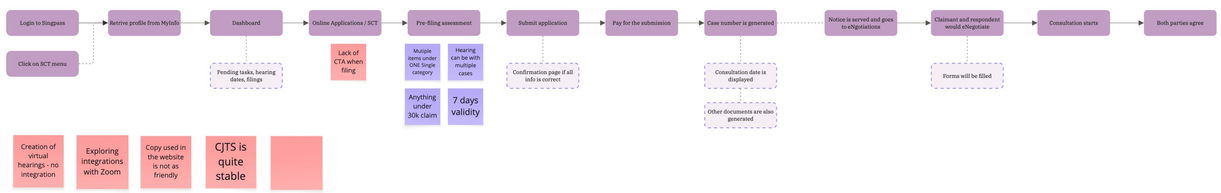
Case folder

CJTS also integrates with WOG AD

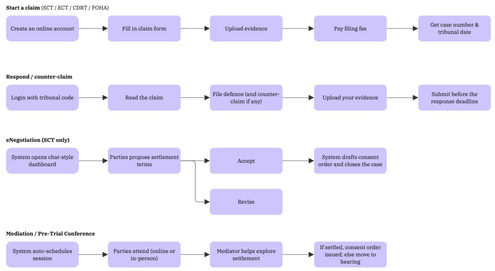
Interfaces are stable and no new requests

Notes

SCT for tenancy



Pain points

Public-Facing Walkthrough


Workflows (to be validated)
